

A home-friendly solution for energy efficiency

Warm climates and rapid urbanisation have caused tremendous increase in energy consumption especially for air-conditioning amongst homes. Therefore, inclining into energy efficient solutions for homes can make a huge difference. In many cases, simply changing a curtain can save up energy consumption.

Discover the Engrave Energy Saver curtains that block out the sun from entering your home, so you may enjoy a cooler environment, better energy efficiency and total home privacy.

Where does heat in your home enter from?

As homes are exposed to sunlight, heat can be transferred in through many ways. Prominently, windows contribute the biggest part to heat accumulation in conventional homes.

With the Engrave Energy Saver curtains in place, heat transferred into homes can be significantly reduced which helps to save on energy consumption as the indoors are kept cooler.

Tips

Keep curtains closed before the heat of the day to reduce any chance of sunlight warming the air. This keeps the room temperature comfortable and lessens the need for air-conditioning.

At a Glance Efficiently blocks all ambient light from the outside

Harmonious dual tone woven fabric provides a versatile and urban comfort

Good thermal insulation to keep room temperatures comfortable

Reduces energy consumption cost
